

# What Is

## Microfat And Nanofat Grafting?

Known by many as fat grafting, Microfat and Nanofat treatments typically involve a simple extraction of your body fat performed in the office with local anesthetic and a syringe. Once your adipose tissue (fat cells) is harvested, it is condensed and used to rejuvenate your face, hands, and body.

These procedures utilize technology developed by Tulip Medical to size down fat into minuscule particles, allowing for precise injections in various areas of the face and body identified by you and your trusted medical provider for rejuvenation.

Sexual Wellness

Prejuvenation

“There are two benefits of adipose tissue transfer; one is a filler effect, the other is the regenerative aspect.”

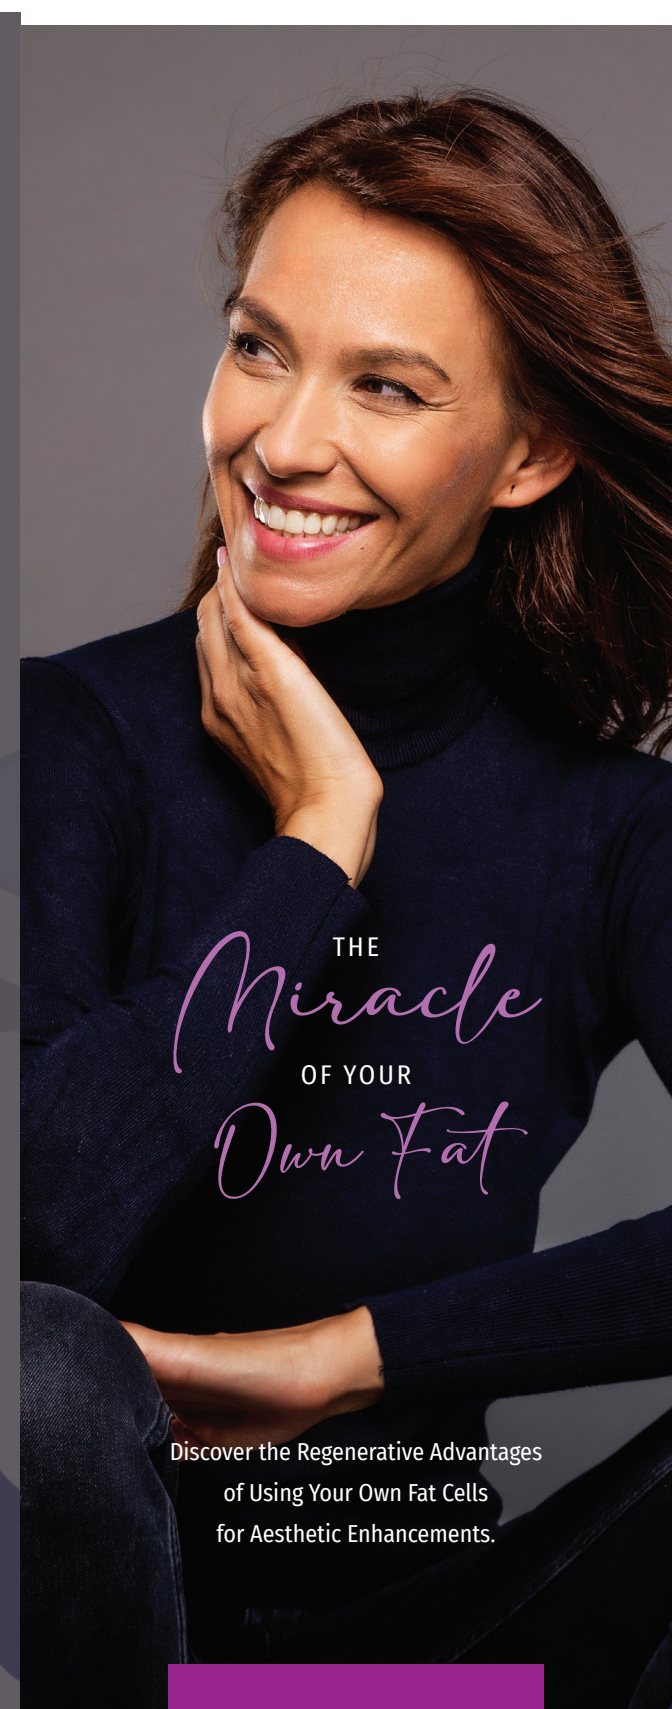

Ramon Llull, MD, PhD

Discover the Regenerative Advantages  
of Using Your Own Fat Cells  
for Aesthetic Enhancements.

IN THE WORLD OF AESTHETICS,  
INNOVATIVE TREATMENTS LIKE  
NANOFAT INJECTIONS HAVE BECOME  
WIDELY RECOGNIZED AS A WAY TO  
REVERSE YOUR SKIN'S AGING PROCESS.  
THE REGENERATIVE PROPERTIES OF  
YOUR OWN FAT TISSUE RESTORE  
YOUR SKIN'S YOUTHFUL TEXTURE,  
RESULTING IN BEAUTIFUL, RADIANT,  
AND HEALTHIER SKIN.

### How Is Nanofat a Game Changer For Skin?

“Filler Fatigue” is growing – The  
Aesthetic Society noted a 57%  
increase in filler reversals and a 34%  
increase in facial fat injections  
between 2020 and 2021.

## Fat Transfer Is The All Natural Alternative To Filler

### Did you know the most powerful regenerative cells live in your own fat tissue?

Discover anti-aging from within with Microfat and Nanofat. This alternative to filler is all natural and tends to last longer than many traditional fillers.

#### 1. Say Hello To Truly Younger Skin:

With Nanofat you can say goodbye to fine lines, wrinkles, skin discoloration, and sagging skin. Studies show improvement in skin quality and texture within six to eight months of treatment via Nanofat grafting.<sup>1</sup> Microfat replaces the natural fat losses due to aging and Nanofat shows evidence of increasing collagen stimulation, promoting skin elasticity, and helping halt or reverse the structural changes of aging skin.<sup>1</sup>

#### 3. It Is Natural And Safe:

Since Microfat and Nanofat treatments use your body's own tissue, your risks are greatly minimized, and adverse reactions or complications are virtually nonexistent. The immediate and long-term benefits are natural-looking results and healthier, glowing skin resembling what you enjoyed in your youth.

#### What The Scientific & Medical Communities Are Saying:

“Nanofat grafting has been shown to have beneficial effects in the treatment of scars, wrinkles, and skin discolorations”<sup>2</sup>

<sup>1</sup>“Fat Grafting for Facial Rejuvenation with Nanofat Grafts,” by Patrick Tonnard, M.D., Ph.D.; Alexis Verpaele, M.D., Ph.D.; and Marcela Carvas, M.D.

<sup>2</sup> Oxford University Press Publication, 2018 Clinical Plastic Surgery 47 (2020): 53-62.

#### 2. Your Fat Is Highly Versatile:

Microfat and Nanofat can be used in multiple aesthetic procedures, such as facial prejuvenation, scar revision, and hand rejuvenation, and in other parts of the body, such as the buttocks. We can tailor our solutions to your exact and unique needs with this simple in-office procedure.

#### 4. Minimal Downtime:

You can enjoy the benefits of these minimally invasive procedures with little to no downtime. As a lunchtime procedure, it can take as little as sixty minutes before you can return to your daily activities, revealing a refreshed and vibrant appearance. For more dramatic results, fat grafting can also be combined with surgical procedures.
